FILTER ELEMENTS FOR HOT GAS FILTRATION
**TENMAT FIREFLY** hot gas filter elements are manufactured from bio-soluble materials and inorganic bonds, enabling them to be used at temperatures in excess of 1000°C.

**FIREFLY** filter elements are designed to remove particulate pollutants from hot gases. **FIREFLY** filters operate at temperatures and efficiencies higher than those achievable with any conventional filtration systems. Other chemical pollutants such as acid gases and dioxins, can be removed with the use of selective reagents or sorbents.

**FIREFLY** filter elements can capture particles less than 1 micron in diameter. The resultant emission levels are typically lower than 1 mg/m³. They are proven to offer cleaner emissions compared to electrostatic precipitators or wet scrubbers.

The filter elements are self supporting and do not require metal cages, which saves time on installation. This is also of value in corrosive environments.

---

**APPLICATIONS**

**APC**
- Incineration of industrial and chemical waste
- Incineration of clinical, animal and domestic waste
- Vitrification of incinerated waste
- Metallurgical processing - ferrous and non-ferrous
- Precious metal recovery
- Soil remediation and reclamation
- Coal derivative manufacture
- Wood waste burning
- Glass, brick and cement industries
- Crematorium incinerator

**ILEP**
- Gasification and pyrolytic processes
- Waste to energy plants

---

**Customer Benefits**
- Do not tear
- Emission level below 1 mg/m³
- No need for gas cooling
- No need for metal cages
- Reduce energy consumption
- Protect vital components
- Non-ceramic

**Key Features**
- Resistance in excess of 1000°C
- 99.99% filtration efficiency
- 100% spark-proof
- Self-supporting
- High strength
- High chemical resistance

**Material Grades**
- CS 1150F - Lengths up to 1.5 m
- CS 1255F - Lengths from 1.8 m

---

**APC**
- Incineration of industrial and chemical waste
- Incineration of clinical, animal and domestic waste
- Vitrification of incinerated waste
- Metallurgical processing - ferrous and non-ferrous
- Precious metal recovery
- Soil remediation and reclamation
- Coal derivative manufacture
- Wood waste burning
- Glass, brick and cement industries
- Crematorium incinerator

**ILEP**
- Gasification and pyrolytic processes
- Waste to energy plants

The information contained in this data sheet is presented in good faith. They are typical test results tested generally in accordance with BS 2782 and ASTM test methods and should not be used for specifications. **TENMAT** does not warrant the conformity of its materials to the listed properties or their suitability for any particular purpose. For further information please contact our Technical Sales Department on +44 161 872 2181.

### SEALS

**TENMAT** seals have been specifically designed to work in conjunction with **FIREFLY** filter elements to ensure tightness throughout the life of the filter. The seals are flexible and absorb minor deflections in the header plate while dampening vibrations.

**TENMAT** seals are manufactured from high quality exonerated fibers and they are highly compressible yet strong. RF1000FL is used for most applications. RF1200FL is used for ultra high temperatures and/or reducing-atmosphere applications. Please consult **TENMAT** for support on appropriate seal selection.
